ETNA Software released ETNA Fix Engine

ETNA Software has released ETNA FIX Engine that supports connectivity to 27 market execution venues and 10 market data feeds for financial software applications.

The software connectivity is provided using FIX protocol and custom APIs. ETNA FIX Engine can be integrated with any financial software on one side and can be connected to a market execution venue and market data feed on the other side.

"We have reached a significant amount of market data feeds and market execution venues supported by ETNA FIX Engine," said Roman Zhukov, CEO of ETNA Software. "The connectivity can be provided starting within 2 weeks' time period. We are open for other providers to integrate into ETNA FIX Engine."

The most demanded market execution venues supported are Bloomberg, CITI/AutoDesk, E-Trade, Fidelity, Goldman Sachs, Interactive Brokers, J.P.Morgan, Merrill Lynch, Morgan Stanley, TD Ameritrade and Trading Technologies.

The most demanded market data feeds supported are Barchart, eSignal, Interactive Data and SIX Telekurs.

ETNA Software FIX Engine key features:

- Support for Flat/Object model APIs
- Standard & rule-based routing
- Testing/Benchmark tools included
- Customized for any asset class
- Support for custom message types
- Administrator's Panel for monitoring and control

FIX Gateway Development

ETNA Software develops high performance, custom FIX protocol gateways for additional connectivity. We can then integrate a custom-developed FIX gateway with your existing trading software and/or with our order routing solution to enable smarter order execution.

ETNA Software solutions will help you to connect to the majority of financial markets' participants.

Custom FIX APIs

ETNA Software develops custom FIX Protocol APIs for sell-sides and markets using .NET or JAVA technologies.

A custom developed FIX API will allow investment management firms and other [buy-side](#) organizations to implement a specific set of FIX protocol messages that will guarantee a robust trading experience on their electronic trading platform.

As a result, buy-side developers and IT integrators will praise your platform for ease-of-use and rich capabilities.

Your custom FIX API will include:

- Synchronization of orders/positions
- Order handling
- Automated notifications
